The Future of Communication with the WTS9070

Your key technology for an efficient TETRA radio system!

The Evolution of Your Radio Technology

Discover the future of communication with the **WTS9070** – the key technology for an efficient TETRA radio system! The intuitive user interface allows you to effortlessly control core functions and monitor two TETRA call groups simultaneously. Thanks to the innovative colour scheme, you always stay on top of things: instantly recognize whether a group call, individual call, priority call, or emergency call is coming in. Priority and emergency calls are specially highlighted so that you can react in a split second – crucial in critical situations!

The **WTS9070** offers you a wide range of speaking options and can be flexibly extended, making it the ideal solution for numerous fields of application. Take the next step in radio communication and optimize your workflows with the **WTS9070**!

The Future of Wired Terminal Stations for DAMM TetraFlex® Systems

Discover the innovative **WTS9070** wired terminal station, specially developed for seamless integration into existing TetraFlex radio system infrastructures. With our advanced software application, we offer you a powerful single-user solution that enables direct IP connectivity via the TerminalGateway.

Location Independence and Reliability

The **WTS9070** revolutionizes your communication capabilities: Thanks to direct IP connectivity to the Tetra system, you benefit from location independence while minimizing potential "points of failure". Optionally, you can use redundant IP connectivity to further increase the availability of your communication infrastructure. Even in areas without high-frequency coverage, the **WTS9070** remains fully functional.

User-Friendly Interface

Our software-based user interface impresses with its intuitive and easy operation. Integration into existing PC workstations allows convenient operation via mouse, keyboard, or touchscreen. In addition, external devices such as the gooseneck microphone (Imtradex TM3) and PTT push buttons can easily be connected to optimize your workflows.

Versatile Features for Effective Communication

The **WTS9070** offers you a wide range of features to make your communication more efficient:

- IP connectivity via TerminalGateway
- Display of multiple groups and group calls
- Simultaneous speaking in multiple call groups
- Group scanning and individual calls
- Talk back to active scan group
- Option for automatic or manual acceptance of individual calls
- Emergency call and phonebook functions
- Telephony connection for individual calls
- Status display and numeric keypad

In a high-frequency-free control room environment, ambient noise is also reduced, which is particularly important when no handheld radios interfere with the PC. The use of headsets further ensures a comfortable working atmosphere.

Optimization of Network Load

In multi-cell Tetra systems, the **WTS9070** helps reduce network load (on the air interface). Direct wired (IP) communication with the infrastructure eliminates the need for a radio device, which not only saves costs, but also increases efficiency.

Compatibility

The **WTS9070** wired terminal station is the perfect addition to DAMM TetraFlex® systems (BS418, BS421, BS422, and BS424) and offers a wide variety of applications. In combination with the TKF422 system case solution, you can set up an ad-hoc control center in no time - ideal for disaster response operations. **WTS9070** - your solution for effective communication even in critical situations!

Your Advantages at a Glance

Benefit from the wide range of PTT functions that enable centralized integration of many TETRA features. Communicate efficiently through simultaneous speaking in multiple call groups and select individually which groups you want to monitor. Colored highlights of active group calls and audio-visual signals for priority and emergency calls ensure that important information is not missed.

With an intuitive user interface, audio output via headset and speaker, as well as additional connection options such as USB-PIO and sound card, the **WTS9070** is not only user-friendly but also highly flexible. In a redundantly implemented TETRA radio system, it guarantees most reliability - even in the most challenging situations.

Experience the future of communication with the **WTS9070**!
